## FN2114

### Pedal Load Cell

## SPECIFICATIONS

- Ranges 200 to 2500 N (40 to 500 Lbf)
- Aluminum body
- Cable Gland Output
- Accuracy 1% regardless force application point

The **FN2114** load cell has been developed for pedal load testing. Its size allows the sensor to be easily installed on the pedals of any vehicle or a fatigue/endurance test bench.

Since the forces to be investigated on the brake, clutch or accelerometer pedals are different, and vary from a small car to a heavy goods vehicle, TE CONNECTIVITY offers different measurement ranges as standard.

With an internal mechanical decoupling system, accuracy is 1% F.S., regardless of the point of force application. Integrated amplifier for high level output is optionally available for all ranges.

A similar pedal load cells with thicker dimension exists as model **FN2570**.

With many years of experience as a designer and manufacturer of sensors, TE CONNECTIVITY often works with customers to design or customize sensors for specific uses and testing environments.

On request, Instruction documents can be provided to ease the selection and use of our sensors and provide helpful tips.
