The RT9420 provides rotational position feedback via 4...20 mA current loop signal. This device combines the superb linearity and resolution of a plastic-hybrid potentiometer and the durability of our 4...20mA circuit to provide an accurate and reliable electrical signal. Additionally the zero and span settings are adjustable through access holes in the housing.

This innovative sensor is designed to meet NEMA-4 and IP67 standards, is available in full stroke ranges of 1/4 to 50 turns.

*Optional 3-wire, 0...20mA output signal available.

RT9420 Rotation Position Sensor Industrial • 4..20 mA • 0..20mA

Output Signal Selection:

The output signal direction can be reversed at any time by simply changing the dip-switch settings found on the internal signal board. After the settings have been changed, adjustment of the Zero and Span trimpots will be required to precisely match signal values to the beginning and end points of the stroke.
