The **XPC10** is a miniature pressure transducer specifically designed to measure static and dynamic pressures in temperatures from -40 to 220 °C [-40 °F to 428 °F] (unamplified models).

Made of stainless steel, the rugged **XPC10** is suitable for corrosive liquids and gases in a wide variety of harsh environments.

The **XPM10** threaded construction virtually eliminates zero shifts caused by installation torque.

The core technology of the **XPC10** consists of a foil strain gage wired in a Wheatstone bridge circuit to provide excellent temperature stability. An on-board amplifier is optionally available.

A **PT1000** temperature probe is optionally available for all ranges as a custom design.

On request, Instruction documents can be provided to ease the selection and use of our sensors and provide helpful tips.
